

Deliberate Fire Setting

Performance Summary

Deliberate Fires

Deliberate Fires by Ward (% share)

Deliberate Fires by Time of Day

Deliberate Fires by Classification

Primary Fire Ratio by Activity Type

Secondary Fire Ratio by Activity Type

Deliberate Fires Compared to Operational Activity

Definitions

Primary Fires - all fires in buildings, vehicles and outdoor structures or any fire involving casualties, rescues or fires attended by five or more appliances

Secondary Fires - fire incidents that did not occur at a primary location, was not a chimney fire in an occupied building, did not involve casualties (otherwise categorised as a primary incident) and was attended by four or fewer appliances.

It is disappointing to note a slight increase in both the year on year and the 3 year average within this indicator again this is against historically low figures. The activity predominantly involves grass and woodland areas during the holiday period with a total increase of 3 incidents. There were also 2 deliberate car fires during this period on separate dates and in different locations.

Non Domestic Fire Safety

Performance Summary

Non Domestic Fires

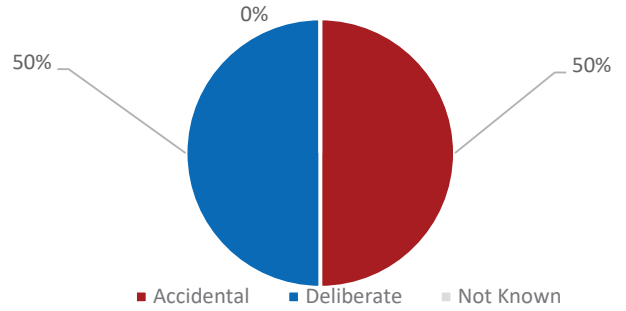

Non-Domestic Fires by Ward (% share)

Non-Domestic Fires by Time of Day

Non-Domestic Fires by Nature of Origin

Severity of Non-Domestic Fires

Non-Domestic Fires by Premises Type

It is pleasing to note a significant reduction in non domestic fires against the year on year average, no increase on the 3 year average and a total of only 2 incidents within this reporting period.

Unwanted Fire Alarm Signals

Performance Summary

Unwanted Fire Alarm Signals

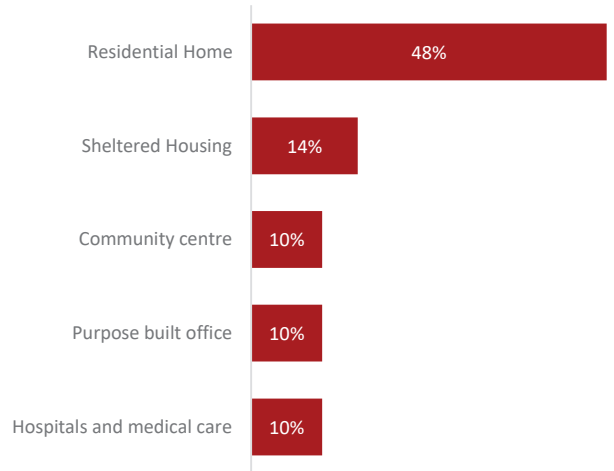

Unwanted Fire Alarm Signals by Ward (% share)

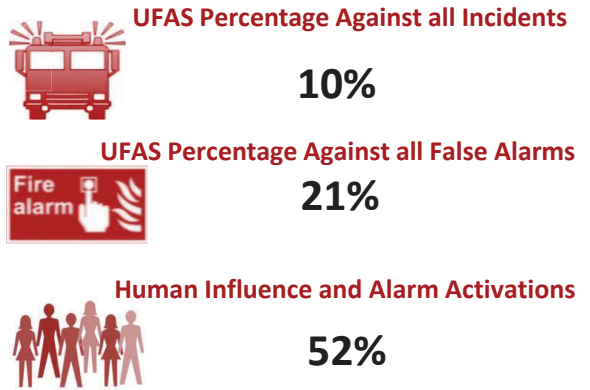

Unwanted Fire Alarm Signals by Time of Day

Unwanted Fire Alarm Signals - Top 5 Premises

Unwanted Fire Alarm Signals Activity Ratios

Average Unwanted Fire Alarm Signals per Day

It is encouraging to note a significant decrease in both the year on year and the three year average within the UFAS indicator. This is reflective of the new procedure being implemented and positively impacting the totals. However we still continue to see a trend where the activity is avoidable and is predominantly in the care environment and caused by human behaviour.
